

INFO DOC

Can stem cell infusion therapy help **PAIN MANAGEMENT?**

Yes, stem cell therapy can help with pain management by repairing damaged tissues, reducing inflammation, and regenerating cartilage or other tissues to address the underlying cause of pain, rather than just its symptoms. It is used for various conditions, including osteoarthritis, tendon and ligament injuries, back pain from degenerative discs, and chronic joint pain, often serving as an alternative to medication, steroids, or surgery. WATCH: Mel Gibson: On Joe Rogan (episode 1066 - Jan 2018) w/ Dr Neil Riordan. How Stem Cell Infusion Therapy saved his 92 year old Dad's life

<https://yourbesthealthy.life/page-2.php?nid=6>

How it Works

- **Tissue Regeneration:** Injected stem cells respond to injury signals by migrating to the damaged area and stimulating the body's own cells to regenerate and heal injured tissues. [\[3, 4, 5\]](#)
- **Anti-Inflammatory Effects:** Stem cells have powerful anti-inflammatory properties that help reduce swelling and pain in conditions like tendonitis. [\[3, 5\]](#)
- **Targeting the Source:** The therapy targets the root cause of the pain, such as damaged discs or worn-out cartilage, leading to potential long-lasting results. [\[6, 7\]](#)

Conditions it Can Treat

Stem cell therapy is used to manage pain from: [\[1, 2, 4, 6, 8, 9\]](#)

- Osteoarthritis and other joint pain
- Degenerative disc disease
- Tendon, ligament, and connective tissue injuries
- Neuropathic pain and nerve damage
- Back pain, including sciatica

Benefits

- **Minimally Invasive:** It offers a less invasive alternative to surgical procedures. [\[4, 10\]](#)
- **Addresses Root Cause:** It focuses on healing the underlying problem, providing potential long-term relief. [\[3, 7\]](#)
- **Avoids Medications:** It can reduce or eliminate the need for pain medications and steroids. [\[3, 11\]](#)

- **Improved Function:** Patients may experience improved mobility and joint function after treatment. [2, 11, 12]
